1.0 Introduction

The Healthweigh[®] Physician Scale is an electrically-powered device designed to be placed on/integrated into the floor and upon which a patient is intended to stand to measure and display total body weight. It is not designed to weigh a wheelchairbound patient or bed/stretcher.

Lightweight and slender, the scale is a professional tool providing precision weighing information. The design patented scale is multi-functional; weight is automatically displayed; after height input into scale, the patient's BMI is displayed.

Manuals are available from Rice Lake Weighing Systems at www.ricelake.com/manuals

Warranty information is available at www.ricelake.com/warranties

Safety Definitions:

DANGER: Indicates an imminently hazardous situation that, if not avoided, will result in death or serious injury. Includes hazards that are exposed when guards are removed.

WARNING: Indicates a potentially hazardous situation that, if not avoided, could result in serious injury or death. Includes hazards that are exposed when guards are removed.

CAUTION: Indicates a potentially hazardous situation that, if not avoided, could result in minor or moderate injury.

IMPORTANT: Indicates information about procedures that, if not observed, could result in damage to equipment or corruption to and loss of data.

General Safety

Do not operate or work on this equipment unless this manual has been read and all instructions are understood. Failure to follow the instructions or heed the warnings could result in injury or death. Contact any Rice Lake Weighing Systems dealer for replacement manuals.

WARNING: Failure to heed could result in serious injury or death.

Do not use in the presence of flammable materials.

Operating at other voltages and frequencies than specified could damage the equipment. Use only medical approved mains adapters compliant with EN60601-1 standard.

Do not modify this equipment without authorization of the manufacturer.

Do not put this equipment next to or stacked on top of other equipment. This may result in malfunction. If such placement is unavoidable, ensure equipment is monitored regularly for correct operation.

Do not use accessories, transducers or cables other than those specified or provided by manufacturer. This could result in increased electromagnetic emissions or decreased electromagnetic immunity leading resulting in malfunction (see Section 7.0 on page 22).

Portable RF communications accessories (including peripherals such as antenna cables and external antennas) should be used no closer than 30 mm to the equipment or cables specified by the manufacturer. This may result in equipment performance degradation (see Section 7.0 on page 22).

Ensure the equipment is located in a shielded location. Failure to do so may result in performance degradation, interference with other equipment or interference with radio services.

This equipment has been tested for radiated RF immunity at selected frequencies. Using this equipment near equipment emitting other frequencies could result in improper operation (see Section 7.0 on page 22).

CAUTION: To prevent injury, never leave the person being weighed unattended while on the scale.

To prevent injury, do not transport the scale while a patient is on the scale.

Make sure no load is on the scale before transporting the scale.

Do not drop the scale or subject it to violent shocks.

The scales are for determining weight of persons in rooms intended for carrying out medical care. The scales are NOT intended to diagnose, prevent and monitor diseases. The scales are equipped with serial interface that can connect to the equipment compliant with EN60601-1 standard.

Do not use scale for dynamic weighing.

Do not leave a permanent load on the weighing plate. This can damage the scale.

Be careful to avoid shock and overloading the scale in excess of the prescribed maximum load rating (MAX) minus any tare weight that is already present.

Never operate the scale in a hazardous location.

The scale design is not explosion-proof. Flammable mixture can form from anesthetic means containing oxygen or nitrous oxide (laughing gas).

IMPORTANT: For accurate weighing, the scale must be placed on a flat, stable surface.

For accurate weighing, verify proper operation according to the procedure described in this manual before each use. If the "LO Bat" indicator activates, for accurate weighing, recharge the battery or connect the scale to an AC power source as soon as possible.

To avoid cross contamination, clean the scale plate after each weighing. Avoid direct skin contact during weighing. The H151-11-5 is not equipped with the function of rechargeable battery.

The purpose of this scale is to determine weight in the course of medical practice.

Used as non-automatic scale, a person is to be positioned in the center of the scale plate. Weight can be read after stable value has been obtained.

Materials in the products have been tested and approved for the safe use by operator and patient.

All batteries included with Healthweigh products intended for sale in the EU market are classified as 'Portable Batteries for General Use' and comply with European Battery Regulation (EU) 2023/1542.

1.1 Disposal

Product Disposal

The product must be brought to appropriate separate waste collection centers at the end of its life cycle.

Proper separate collection to recycle the product helps prevent possible negative effects on the environment and to health, and promotes the recycling of the materials. Users who dispose of the product illegally shall face administrative sanctions as provided by law.

Battery Disposal

Dispose of batteries at appropriate waste collection centers at the end of their life cycle in accordance with local laws and regulations. Batteries and rechargeable batteries may contain harmful substances that should not be disposed of in household waste. Batteries may contain harmful substances including but not limited to: cadmium (Cd), lithium (Li), mercury (Hg) or lead (Pb). Users who dispose of batteries illegally shall face administrative sanctions as provided by law.

WARNING: Risk of fire and explosion. Do not burn, crush, disassemble or short-circuit lithium batteries.

2.0 Setup

2.1 Unpacking the Scale

Visually inspect the scale to ensure all components are included in the box. The box should contain the scale, this manual and a box labeled *Parts Inside*.

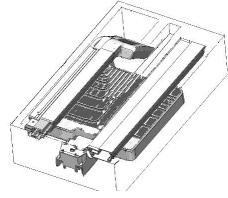

Figure 2-1. Unpacking the Scale

The Parts Inside box includes the following parts:

- Two (2) Wheels
- One (1) wheel hinge
- Five (5) pan head cross recess M5 x 35 screws
- Two (2) pan head cross recess M4 x 16 screws
- 6 AA batteries
- RS232 communication cable 2.0 meter

2.2 Parts for Assembly

Remove the following parts from the box and arrange them on a clear work area:

- · Scale platform
- Upper height rod
- · Upper pillar with indicator
- Bottom pillar

CAUTION: Take care not to drop parts. Mishandling parts may cause damage to parts or injury to personnel.

Use the following tools to assemble the scale:

Philips screwdriver size 2

2.3 Assembling the Scale

1. Insert the bottom pillar to the scale platform, using the studs as guides.

CAUTION: Take care NOT to catch the load cell cable between these parts.

IMPORTANT: Pay attention that there are two screw holes on the bottom pillar, which on assembly needs to be position upward.

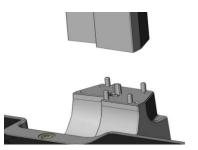

Figure 2-2. Insert Bottom Pillar to Scale Platform

2. Insert the four M5 screws and tighten them in place with Phillips screwdriver.

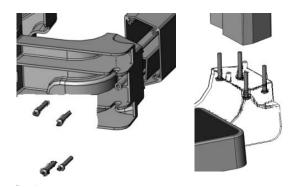

Figure 2-3. M5 Screws Installation

- 3. From the *Parts Inside* box, take out the two wheels and the hinge.
- 4. Place each wheel on the hinge and assemble them in the grove, locking in place using the M5 screw and a Phillips screwdriver.

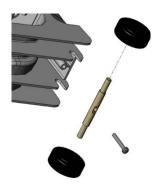

Figure 2-4. Wheel Installation

5. Insert the upper pillar into the bottom pillar.

() IMPORTANT: Take care not to damage the load cell cable.

- 6. Insert the extra cable into the bottom pillar.
- 7. Insert the height rod edge into the appropriate rail.
- 8. Secure the upper unit assembly by screwing the two M4 screws in the back of the unit.

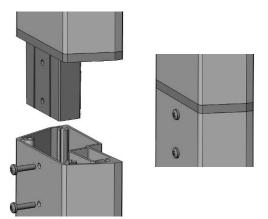

Figure 2-5. Assembling Pillars Before (left) and After (right)

2.4 Transporting the Scale

The scales are equipped with two wheels, which enable it to be transported over short distances.

- CAUTION: Ensure that there are no other people in the immediate vicinity. Ensure there is no load on the scale Do not drop the scale during repositioning. Dropping the scale, might damage the scale and/or cause personal injury.
 - 1. Unplug the power adapter from the socket.
 - 2. Tilt the scale back so it can freely move on the wheels.
 - 3. Relocate the scale to its new location.
 - 4. Set the device in an upright position.
 - 5. Plug the power adapter unit into the socket.

2.5 Setting the Device

- 1. Setup the device so it only makes contact with the ground via the foot screw.
- 2. Setup the scale so that the weighing area does not touch other objects.
- 3. While you are weighing, ensure that the patient doesn't touch the scale display or pole.
- 4. Place the scale on a flat, stable surface.

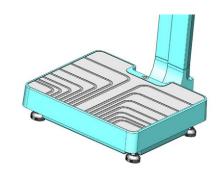

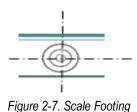

Figure 2-6. Scale Footing

5. Align the scale by turning the foot screws the air bubble in the spirit level must be precisely positioned int he middle of the circle.

3.0 Operation

3.1 Keypad

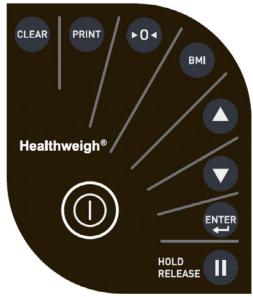

Figure 3-1. Keypad

Key	Name	Function
0	On/Off	Turns the scale on or off.
PRINT	Print - kg	A long press will trigger a transmission of data sent out by RS232 (see Section 3.8 on page 16). When data is sent out from the port, the display flashes the word PRINT to acknowledge the data was sent.
(b 0)	Zero	Zeroes the weight on the scale if the scale is stable. This function will only work if the weight on the scale is 2% or less of full capacity.
	Hold/Release	Pressing on this key while HOLD indicator is off will keep the most current weight value shown on the display along with the HOLD indicator. Pressing on this key while HOLD indicator is on will release the weight and turn off the HOLD indicator. This key is not active in BMI mode.
ВМІ	BMI	Enters BMI mode. Only works if there is a locked weight shown on the display and the function is turned on in the con- figuration settings.
	Up/Down	Adjusts the value of the flashing digit/number.

Table 3-1. Keypad Functions

Key	Name	Function
CLEAR	Clear	Causes the value to return to default (170.0 cm). In BMI final result display, pressing this key will return the scale to weighing mode.
ENTER	Enter	Accepts the value of the parameter last entered and moves to the next stage. A long press during scales start-up process will enter id display (before parameter mode).

3.2 Display

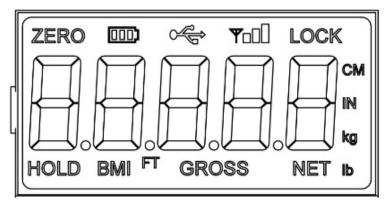

Figure 3-2. Display

Display	Description		
ZERO	Scale ready for weighing		
Battery Indication	Power left in the battery		
USB	USB connected to the scale		
LOCK	Weight is stable and the display is locked on the value		
СМ	Unit of length on the SI measurement system		
IN	Unit of length on the Imperial and US customary measurement systems		
kg	Unit of mass on the SI measurement system		
lb	Unit of mass on the Imperial and US customary measurement system		
NET	Indicates net weight value while tare is on		
GROSS	Indicates eight value while tare is off		
FT	Unit of length on the Imperial and US customary measurement system		
BMI	Indicates BMI calculation is on		
HOLD	Indicates weight reading will remain on screen until release (by pressing the HOLD again)		
oz	Unit of mass on the Imperial and US customary measurement systems		

Table 3-2. Display Descriptions

3.3 Scale Operation

- 1. To operate the scale, using the AC adapter, insert the AC adapter plug into the back of the scale and the AC adapter in to the wall power socket.
- 2. To operate the scale with dry batteries, insert the batteries (if it is the initial use).
- 3. Press the ON/OFF button to turn the scale on.
- 4. The display will show START, display test, version number and finally 00.0.
- 5. When the self-test function is complete, the digital display should read 00.0 and the CHARGE indicator should be illuminated on the back.

() IMPORTANT: Firmware version: 11454

The scale is ready to weigh load.

3.4 Weighing

- 1. Place a weight on the scale. The digital display should blink until the weight calculation is complete.
- 2. Press a short press, on the **PRINT** button to select the weight units, either in kilograms or in pounds.
- 3. Press the **REWEIGH** button; the digital display should again show the weight of the scale display.
- 4. To keep the weight reading, press the **HOLD** button; the *HOLD* will appear on the display.
- 5. Remove the weight from the scale. The digital display should continue to show the weight.
- 6. Press the HOLD button, the HOLD indicator will disappear and the digital display should return to zero.

WARNING: Three beeps will sound upon weighing. Make sure the HOLD is released if no beeps sounded.

NOTE: If the set up procedure failed, refer to the TROUBLESHOOTING section for instructions. If the problem is not resolved, refer to qualified service personnel.

When the AC adapter is inserted into power source the LED lights up red. When dry batteries are fully drained, replace the batteries.

3.5 BMI Procedure

1. Person steps on scale while ZERO displays.

() IMPORTANT: While you are weighing, ensure that the patient doesn't touch the scale display.

- 2. Weight is display (without HOLD annunciator turned on).
- 3. Press the **BMI** button to enter BMI mode. BMI and cm indicators are on and the display shows the height's default value 170.0 cm. All digits are flashing.
- 4. Use **UP/DOWN** buttons to adjust the entire value. Pressing once will adjust by 0.5 cm. If you hold the key down it will keep increasing or decreasing the values.
- 5. Press **ENTER** to accept the values. BMI value shows on the display.
- 6. Pressing CLEAR to return to weighing mode. BMI indicator is off.

NOTE: The last height value entered is saved until the Zero is displayed or negative weight is detected. At this point, the value returns to the default value.

Hold/Release Function

- 1. When the person is on the scale, press the HOLD\RELEASE key.
- 2. When the person steps off the scale the weight will remain the same. The zero flag will not turn on.
- 3. At this stage the ZERO key will not work. The only way to return to zero from here is to press the HOLD\RELEASE key once more.

3.6 Rechargeable Battery

For dry cell batteries, the indicator can be supplied with 6 AA dry cell batteries, which will be inserted at the back of the indicator. The batteries will be secured with a cover placed on the indicator back.

- 1. Open the back chamber cover.
- 2. Insert the supplied batteries.
- 3. Close the batter chamber cover.

Figure 3-3. Battery Change Procedure

NOTE: A Philips head screwdriver is required for battery removal.

IMPORTANT: Dispose of batteries at appropriate waste collection centers at the end of their life cycle in accordance with local laws and regulations. Batteries and rechargeable batteries may contain harmful substances that should not be disposed of in household waste. Batteries may contain harmful substances including but not limited to: cadmium (Cd), lithium (Li), mercury (Hg) or lead (Pb). Users who dispose of batteries illegally shall face administrative sanctions as provided by law.

Battery Indicator

Battery Status	Flag Indicator		
Maximum battery value	3 bars are on		
Medium 2 battery value	2 bars are on		
Medium 1 battery value	1 bar is on		
Low battery	Battery frame		
Minimum	Flashing battery frame		
Critical	Scrolling LOW BAT and auto shutoff		
No battery	Off		

Table 3-3. Battery Status Indicators

- If external power supply is connected the battery flag is turned off.
- · When on battery, the backlight power is reduced to 60 percent.

3.7 **Power and Communication Connections**

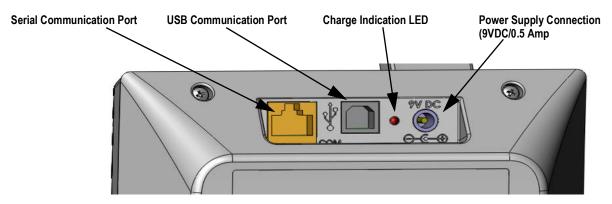

Figure 3-4. Back of Indicator

Port	Location			
	The RS232 communication cable will be connected to the left connector, on the connectors' panel marked with			
	the word COM. Afterward the RS232 communication cable will be connected to the computer.			
USB Communication Port The RS232 communication cable will be connected to the middle connector, on the connector				
	with the USB marking. Afterward the USB cable will be connected to the computer.			
	The power adapter will be connected to the right connector, on the connectors' panel, marked with power inlet specification. Afterward the power adapter will be inserted to the wall socket.			

Table 3-4. Port Connection Locations

NOTE: CHARGE indicator led will light RED upon connecting the power adapter. On scales with dry batteries the led will continue to emit RED.

3.8 Height Readings

Use the following procedure to perform height readings.

- 1. Lift up the height level and extract the height rod.
- 2. Position the patient on the center of the scale.
- 3. Gently lower the height rod, until it touches the patient's head.
- 4. Verify the patient is looking forward and the height level is horizontal.
- 5. Height reading can be seen on the ruler, as seen on the yellow marking.

Figure 3-5. Yellow Ruler Locations

3.9 Communication

The scale has a communication protocol: ESC protocol. An ESC protocol is using the escape (0X1B or ASCII 27) to indicate that there is a command following. On the computer, side there must be a listener created by the vendor that will interpret this protocol. This listener must also take care of all the issues regarding data integrity, etc., to make sure that the data sent and received is valid.

Communication can be execute through either RS232 I/O port or USB I/O port. The communication parameters are:

- 9600 baud (selectable in the programming mode)
- 8 data bits
- 1 stop bit
- No parity
- No handshaking

For the USB connection, the USB driver installation will be on Windows® systems. The USB driver can be downloaded from the distributor and installation will be with the distributor's guidance. The scale support ESC protocol, for addition information contact distributor.

3.10 Print Button

A long press will send data from both RS232 and USB ports. When data is transmitted out via a port the display flashes the word PRINT to acknowledge the data was sent.

In weight mode

PATIENT WEIGHT 60.1 kg

In BMI (On calculated BMI display only)

For kg Unit of Measurement:

PATIENT WEIGHT 60.1 kg

PATIENT HEIGHT 170.0 cm

PATIENT BMI 20.8

In case of underweight or overweight, the word UNDER or OVER will be sent accordingly.

4.0 Maintenance

This section provides instructions for maintenance, cleaning and troubleshooting Healthweigh scale models.

IMPORTANT: Before first use and after periods of non-use, check the scale and batteries for proper operation and function. If the scale does not operate correctly, refer to qualified service personnel.

Check overall appearance of the scale for damage, wear and tear.

Check the batteries for damage, wear and tear. Do not use if damaged.

Inspect AC adapter for cord cracking or fraying or for broken or bent prongs.

For models with dry battery powered indicators, remove the batteries before periods of non-use.

WARNING: Maintenance operations not mentioned in this section, should be perform by qualified service personnel.

4.1 Cleaning

Proper care and cleaning is essential to ensure a long life of accurate and effective operation.

CAUTION: Do not immerse the scale into cleaning or other liquid solution. Clean all external surfaces with a clean damp cloth or tissue.

4.2 Replacing Batteries

On a low battery indication, follow the instructions on how to replace the batteries.

WARNING: Before you replace the batteries, disconnect the scale from the AC power source.

- 1. Turn off the scale.
- 2. Open the batteries' cover and remove it; keep it for reassembly.
- 3. Replace the batteries with a new set of 6xAA 1.5V batteries.
- 4. Close the battery cover.
- 5. Turn on the scale.

IMPORTANT: Dispose of batteries at appropriate waste collection centers at the end of their life cycle in accordance with local laws and regulations. Batteries and rechargeable batteries may contain harmful substances that should not be disposed of in household waste. Batteries may contain harmful substances including but not limited to: cadmium (Cd), lithium (Li), mercury (Hg) or lead (Pb). Users who dispose of batteries illegally shall face administrative sanctions as provided by law.

WARNING: Inappropriate batteries placement - will cause damage to batteries and might ignite the batteries.

4.3 Calibration Procedure

Calibration to be performed by authorized personnel only.

IMPORTANT: Scales with OIML Class III compliance have a seal to prevent any unauthorized person from performing calibration.

4.4 Troubleshooting

Refer to the following instructions to check and correct any failures before contacting service personnel.

Symptom Possible Cause		Corrective Action		
	Dood botton	Connect scale to power source		
Scale does not turn on when	Dead battery	Replace batteries		
using rechargeable battery	Faulty electrical outlet	Use a different outlet		
	Bad power supply	Replace adapter		
	External object interfering with the scale	Check and remove all interference from the scale		
	Weighing tray is not placed properly	Place the tray in its proper place		
Questionable weight/	Display did not show 0.0 kg before weighing	Remove patient, zero the scale and begin weighing process again		
Scale does not zero	Scale not placed on a stable surface	Place the scale on a stable surface and begin weighing process agair		
	Scale is out of calibration	Check weigh with known weight value		
The display shows STOP	Load on the scale exceeds the capacity	Remove the excess weight and use the scale according to its limits		
the display shows	Load is in under-load condition	Make sure the weighing tray is placed on the base		
The display shows LO Bat Rechargeable battery is low		Recharge the battery according to instructions		

Table 4-1. Troubleshooting Checklist

Error No.	Definition	Check/Replace		
SAT	A/D saturation	Check loadcell - Call technician		
RTC Error in reading Real Time Clock		Battery of real time is empty or faulty board - Call technician		

Table 4-2. Error List

5.0 Specifications

H151-11-5 Capacity and Graduation

Max 250 kg, Min 2 kg, Graduation ("e") 0.1 kg

Power Requirements

Adapter 240V/100, 50/60Hz-9 VDC, 500mA Use only medically approved mains adapters compliant with EN60601-1 standards.

Environmental

Operating Temperatures: 0°C to 40°C Storage Temperatures: 0°C to 50°C Humidity: 85% Use in atmospheric pressure

Product Dimensions

Length: 37.5 cm Width: 37.5 cm Standing Platform Height: 8 cm Display Height: 133 cm Maximum Height: 220 cm Weight: 10.5 kg

WARNING: In order to comply with EN60601-1, use UL/CE approved AC/DC adapter UE15WPC-1201255PA. The scale is not intended for use in the presence of flammable mixtures.

6.0 Appendix

Guidance and Manufacture's Declaration - Electromagnetic Immunity

The medical scale is suitable for use in the specified electromagnetic environment and it has meets the following immunity test levels. Higher immunity levels may cause the medical scale's essential performance lost or degraded.

Guidance and Manufacture's Declaration - Electromagnetic Emissions

The medical scale is suitable for use in the specified electromagnetic environment and it has meets the following standard's emission requirements.

Phenomenon	Profession Healthcare Facility Environment	Home Healthcare Environment	
Conducted and radiated RF emissions	CISPR 11, Group 1, Class B	CISPR 11, Group 1, Class B	
Harmonic distortion	IEC 61000-3-2:2005+A1+A2, Class A	IEC 61000-3-2:2005+A1+A2, Class A	
Voltage fluctuations and flicker	IEC 61000-3-3:2013	IEC 61000-3-3:2013	

Recommended Minimum Separation Distances

Nowadays, many RF wireless equipments have being used in various healthcare locations where medical equipment and/or systems are used. When they are used in close proximity to medical equipment and/or systems, the medical equipment and/or systems' basic safety and essential performance may be affected. This medical scale has been tested with the immunity test level in the below table and meet the related requirements of IEC 60601-1-2:2014. The customer and/or user should help keep a minimum distance between RF wireless communications equipment and this medical scale as recommended below.

Test Frequency (MHz)	Band (MHz)	Service	Modulation	Maximum Power (W)	Distance (m)	Immunity Test Level (V/m)
385	380-390	TETRA 400	Pulse modulation 18Hz	1.8	0.3	27
450	430-470	GMRS 460 FRS 460	FM ± 5 kHz deviation 1 kHz sine	2	0.3	28
710	704-787	LTE Band 13, 17	Pulse modulation	0.2	0.3	9
745			217Hz			
780						
810	800-960	GSM 800/900,	Pulse modulation	2	0.3	28
870		TETRA 800, 18Hz				
930		iDEN 820, CDMA 850, LTE Band 5				
1720	1700-1990	GSM 1800; Pulse modulation	2	0.3	28	
1845		CDMA 1900;	217Hz			
1970		GSM 1900; DECT; LTE Band 1, 3, 4, 25; UMTS				
2450	2400-2570	Bluetooth, WLAN, 802.11 b/g/n, RFID 2450, LTE Band 7	Pulse modulation 217Hz	2	0.3	28
5240	5100-5800		Pulse modulation	0.2	0.3	9
5500			217Hz			
5785
