SLP-V Lite General Information

- SLP-V Lite installation
  - Refer to the **SLP-V Lite Installation Guide** for the step by step procedure.
  - The installation CD loads the SLP-V Lite program as well as required support programs: Microsoft .Net Framework Version 1.1 and Microsoft Data Access Components.
  - An SLP-V Lite license file is required.
  - Any previous version of SLP-V Lite must be uninstalled before installing a new version. Use the Control Panel, Add & Remove Programs to uninstall SLP-V Lite.

- SLP-V Lite differs from SLP 3.2x in the following ways
  - SLP-V Lite supports only .MDB database format.
  - Keyboards are part of the database; they are not lost when switching databases.
  - A single keyboard can be shared by multiple BC-4000 scales.
  - PLU names are automatically loaded into the preset keysheet when received from the scale (read back the PLU file prior to reading back the preset keys).
  - PLU Editing fields can be rearranged as needed in setup configuration.
  - The main PLU list may be arranged by: PLU Number, Barcode, Description, or Price.
  - PLU search locates words anywhere in the first line description (wildcard "*" no longer required).
  - Korean characters are supported by loading a special setup file. See **SLP-V Lite BC-4000 Korean Setup** for setup procedure.
  - A user license is always required. A demonstration version is only available via a timed license file.
  - As with most new software programs, standard support documentation is available in the on-line Help menu.

- Existing ScaleLink Pro 3.2x PLU files may be imported into SLP-V Lite
  - The SLP 3.2x database files must be saved in .MDB format.
  - Create an empty database before importing.
  - Use the Database Utility to import SLP 3.2x database files into SLP-V Lite. This is located in the File menu. Select "Load/Restore Main Database File".
  - SLP 3.2x ASCII text files may also be imported.
    - Save the exported file with the following setting:
      - Set **File Format** = "Comma delimited"
      - Set **Description Text Format** = "Ishida format"
    - Import the file with the following settings
      - Set Delimiter = "Comma (CSV)"
      - Set Description Text Format = "Ishida (include control codes)"

- The following items are not available in SLP-V Lite. They are available in the SLP-V.
  - Scheduler
  - Sale Wizard
  - Departments, Multiple Databases (a database assigned to a group of scales)
  - Zone Pricing
  - Users

- A separate Setup Utility program is used to configure SLP-V
  - Use the utility to add BC-4000 scales, select and arrange PLU fields, and set default fonts and label sizes.
  - Creating and changing database files is also done in the utility.

- The i-Support program is installed with SLP-V Lite
  - i-Support combines the functions of i-Label and i-View.
  - SLP-V Lite and i-Support share the scale configuration as programmed using the Setup Utility. The scales are not entered separately.
