Data Management Web Application

Rice Lake's WeighVault data management software allows operators to manage multiple counting or checkweighing scales while increasing weight data storage. WeighVault can be used to quickly program, edit and manage unique product IDs from a Windows® computer instead of updating information through each scale's front panel.

Data from every scale connected to WeighVault is organized in a variety of detailed reports. Reports can be exported in multiple formats including word processing, spreadsheets or PDFs. WeighVault also features a REST API function so data can be easily integrated with existing ERP systems.

WeighVault has a Microsoft® SQL Server Express client/server database and protected access through logins for administrator and user roles.

Counting Scales and WeighVault

WeighVault is compatible with Counterpart® counting scales to simplify inventory and piece counting processes. Four different reports are available to provide complete access to scale data: part, inventory, location and activity.

The part report includes the part IDs, descriptions, names, lot numbers, unit weight, tare, unit of measure and current inventory. Inventory reports contain part IDs, names, descriptions and total inventory. Location reports include the same data as inventory reports, but also list a location, such as warehouse. Finally, activity reports present part IDs, unit IDs, request dates and quantities.

Counterpart Functions Only Part Fields:

- ID code [32 characters]
- Unit weight [8 characters]
- Tare weight [8 characters]
- Unit of measure [lb, kg, g, oz]
- Part name [32 characters]
- Part description [32 characters]
- Lot number [32 characters]
- Location [12 characters]
- Inventory quantity [8 characters]

CW-90/90X Functions Only Product Fields:

- Product ID [4 characters]
- Description, two lines [32 Characters each]
- Target weight [8 characters]
- Tare weight [8 characters]
- Overweight limit [8 characters]
- Underweight limit [8 characters]
- Unit of measure [lb, kg, g, oz]

Checkweighing and WeighVault

For checkweighing applications, WeighVault can be used with the CW-90 and CW-90X static checkweighers. The productivity report lists unit IDs, number of weighments, average weight, accepted percentage and average transaction time in seconds. Transaction reports list unit IDs, net weight, target values, units, status and transaction dates.
