

The original iQUBE and the newer iQUBE² smart junction boxes are significantly different from each other and require different installation, and configuration software. Also the software for the connecting indicator needs to be compatible as well as the software for the virtual indicator (if used).

Below are the version requirements for various implementations of both iQUBES:

Device	920® S/W version	820® S/W version	720® S/W version	Revolution® version	Virtui® version
iQUBE	3.14.00 (max)	1.00-1.04	NONE	3.3.5.0	Virtui
iQUBE ²	4.00.00 (min)	NONE	NONE	3.3.5.0	Virtui ²

Note that the 720i and 820i can still use an iQUBE² as a Streaming Input Scale.
