

# Tracer® Aviation Weighing Solutions

## RD-2 / RD-2A Display

**Product:** Tracer AV and Tracer AV2

**Issue:** Display compatibility

**Solution:** Determine display type and replace CPU if incompatible

There are two displays for the Tracer product line, the RD-2 and RD-2A.

- RD-2 works only with the Tracer AV
- RD-2A works with both the Tracer AV and Tracer AV2

The displays look similar, so it is difficult to determine which display is being used.

### Identifying the Display Type

There are two ways to determine if the display is an RD-2 or RD-2A.

1. Look at the display. The RD-2 has nothing etched on the faceplate, while the RD-2A has **Tracer AV2** etched in the lower right hand corner of the enclosure faceplate.

Figure 1. Display Faceplate with Tracer AV2 Etching on the RD-2A Display

2. Look at the serial number label. The label identifies the part number of the display. RD-2 (PN 166483) and RD-2A (PN 207859).

### Repair/Replacement of the Display

Rice Lake Weighing Systems can rework the RD-2 CPU to be compatible with the Tracer AV2 by sending the unit to the factory or a new RD-2A board (PN 211018) can be purchased for field installation.
